Assessment Overview / 13 Topics in One Unified Scenario

Scenario: "Lina Hassan joins the Finance department on 1 June 2026." This single scenario threads through all 13 assessment topics - from navigating ServiceNow on day one to full ITSM lifecycle management.

Part 1 Navigation & Orientation Beginner 5 pts	Part 2 Form & List Layout Beginner 8 pts	Part 3 Business Rules Beginner 10 pts
Part 4 Client Scripts Beginner 8 pts	Part 5 UI Policies Beginner 7 pts	Part 6 Service Catalog Item Beginner 12 pts
Part 7 Flow Designer & Automation Beginner 10 pts	Part 8 Notifications Beginner 7 pts	Part 9 Service Portal Beginner 10 pts
Part 10 Incident Management Lifecycle Beginner 8 pts	Part 11 Service Request Fulfillment Beginner 7 pts	Part 12 Change Management Beginner 8 pts Part 13 Report & Dashboard Beginner 5pts

Total: 105 Points (Scaled to 100) | Pass Mark: 70 Points (70%) | Duration: 1 week | Platform: ServiceNow PDI

Scoring Scale

90–100 Distinction - Ready to join as junior developer	70–89 Pass - eligible to join	50–69 Borderline - Retake of specific parts required	< 50 Fail - Not Ready to join
--	---	--	--

Read Before You Start

- Complete all tasks on your own Personal Developer Instance (PDI). Do not share credentials.
- Follow this assessment in order - each Part builds on the previous one.
- Use naming convention: [YourName]_[ArtifactName] e.g. Lina_PriorityAutoSet
- Take screenshots where required
- Do not delete any records created. Leave all work visible for the assessor.
- Partial credit is awarded - attempt every Part even if previous ones are incomplete.

Guiding Principles

- Least privilege: only assign the access and permissions actually needed.
- Always test as an end user - open a separate browser tab or use impersonation.
- Keep scripts clean, commented, and minimal - do not over-engineer.
- Use meaningful names and descriptions for every artifact you create.
- Think about user experience: forms should be logical, portals should be clear.

Submission Checklist

- All 13 Parts attempted (partial credit given for correct incomplete steps).
- Naming convention [YourName]_ applied to every artifact.
- Screenshots taken and clearly labelled for every required step.
- Instance URL shared with the assessor before the deadline.
- All created records remain intact - nothing deleted.

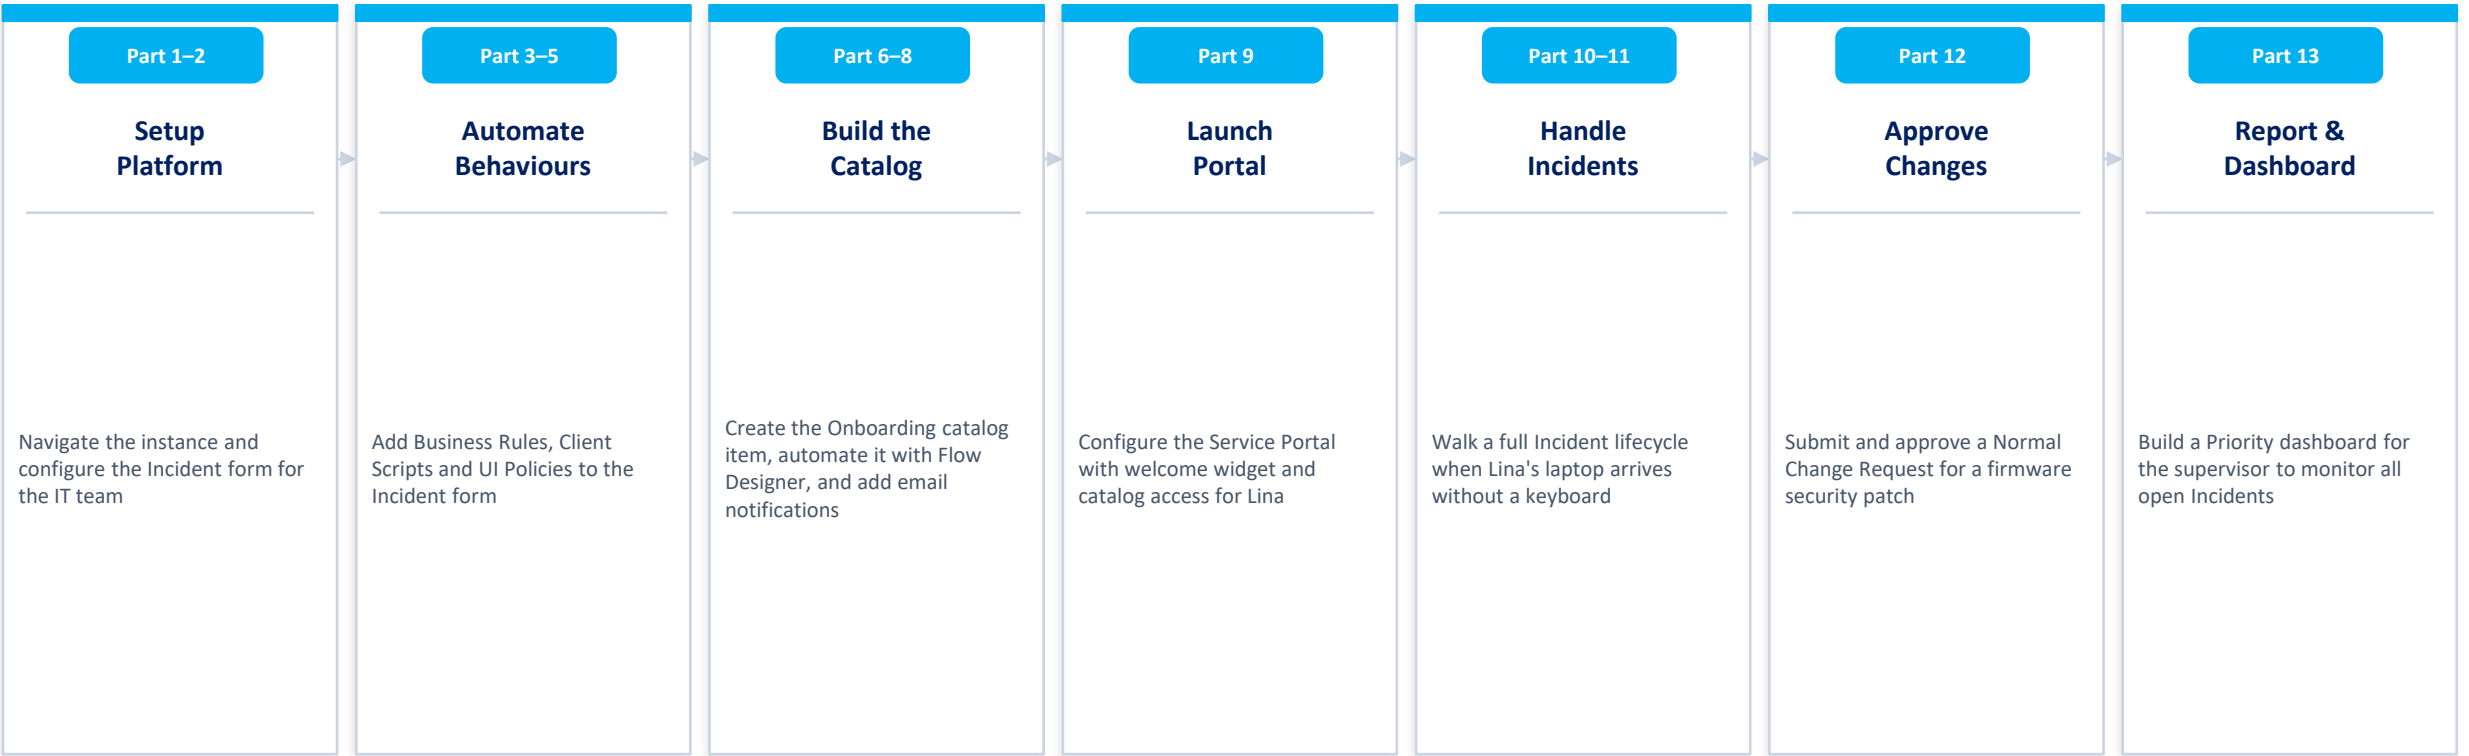

Scenario Story

Lina Hassan has just joined Capgemini's Finance department on 1 June 2026. As the IT team responsible for onboarding new hires, you will build and configure a complete ServiceNow environment to support her arrival - from the very first navigation steps on a fresh instance, through catalog setup, automation, portal configuration, and full ITSM process management.

This assessment follows Lina's journey: from the moment her manager submits an IT onboarding request, through a laptop delivery problem that needs an Incident raised, to a required firmware security patch that needs a full Change Request lifecycle - all while building and configuring the platform that makes it all possible.

How the 13 Parts connect into one journey

You have just been given access to a fresh ServiceNow PDI. Before configuring anything for Lina's onboarding, confirm you can navigate the platform confidently.

What You Need to Do

- 1 Log in to your PDI and open the following modules using the App Navigator: Incidents, Change, Service Catalog, System Definition > Business Rules.
- 2 Use the Global Search bar to find user 'Abel Tuter' and open their user record.
- 3 Pin 3 modules to your Favourites: Incidents, Change > All, and Service Catalog.
- 4 Take a screenshot of your Favourites panel showing all 3 modules pinned.

Acceptance Criteria

- All 4 modules found and opened successfully.
- Abel Tuter's user record opened via Global Search.
- 3 modules pinned (screenshot required).

Grading Rubric

Criteria	Pts	Notes / Hints
All 4 modules opened via App Navigator	2	Describe each path in submission notes
Abel Tuter user record found via Global Search	1	Screenshot of record required
3 correct modules pinned to Favourites	2	Screenshot of Favourites panel required

The IT team lead needs the Incident form reorganised before Lina starts receiving IT requests. Set up the form and list view for daily triage work.

- What You Need to Do
- 1

Open the Incident table Default view using Form Designer (right-click header or System UI > Forms).
- 2

Add these fields if not already present: Category, Subcategory, Business Service, Contact Type, and channel.
- 3

Create a new section titled 'Resolution Details' and add: Resolution code, Resolution notes, Resolved by, Resolved at.
- 4

Make both 'Short description' and 'Caller' mandatory (red asterisk must be visible).
- 5

Personalise the Incident list view with: Number, Priority, Caller, Category, Assignment Group, Assigned To, State, Updated.
- 6

Save form and list layouts. Take screenshots of both.

- ✓ Acceptance Criteria
- Form shows all required fields in correct positions.
- 'Resolution Details' section exists with 4 correct fields.
- Both mandatory fields show red asterisk.
- List shows 8 required columns.

Grading Rubric		
Criteria	Pts	Notes / Hints
All 4 new fields added to form Default view	2	Check field presence in Default view
'Resolution Details' section with 4 correct fields	2	Section name must match exactly
Both mandatory fields configured (asterisk visible)	2	'Short description' + 'Caller'
List view with 8 correct columns	2	Screenshot of list view required

Screenshot is required

Right-click any field label on the form to quickly access 'Configure > Form Layout'. The Resolution Details section must be named exactly as stated.

The service desk manager wants Incidents with high Impact and Urgency automatically escalated. Configure this with a Business Rule so agents can't miss critical issues.

What You Need to Do

- 1

Navigate to System Definition > Business Rules. Create a new Business Rule.
- 2

Name: [YourName]_PriorityAutoSet. Table: Incident. When: Before. On: Insert + Update.
- 3

Set Condition: Impact is 1 (High) AND Urgency is 1 (High).
- 4

Set Active = true and Save.
- 5

Test: Create a new Incident with Impact = 1 and Urgency = 1. Verify Priority = Critical and Assignment Group = Service Desk.
- 6

Screenshot the Business Rule form AND the test Incident record.

✔ Acceptance Criteria

- Business Rule is Active with correct table and trigger.
- Test Incident shows Priority = 1 - Critical after save.
- Assignment Group = Service Desk auto-populated.

Grading Rubric

Criteria	Pts	Notes / Hints
BR created: correct name, table, trigger (Before / Insert + Update)	3	All 3 attributes must be correct
Condition: Impact = 1 AND Urgency = 1	3	Both conditions required
Script correctly sets priority and assignment group	2	Syntax must be valid - check console
Test Incident confirms expected behaviour (screenshot)	2	Priority = Critical, Group = Service Desk

Agents sometimes accidentally set Priority to Critical. Add a client-side warning dialog that lets them confirm or cancel the change before it's saved.

What You Need to Do

- 1
- Navigate to System Definition > Client Scripts. Create a new Client Script.
- 2
- Name: [YourName]_PriorityWarning. Table: Incident. Type: onChange. Field Name: priority.
- 3
- Script logic: when newValue equals '1', show a confirm() dialog. If user clicks Cancel, reset the field.
- 4
- Set Active = true and Save.
- 5
- Test: Open any Incident, change Priority to 1 - Critical. Confirm the dialog appears. Click Cancel and verify the field reverts.
- 6
- Screenshot: the dialog appearing and the field reverting after Cancel.

✔ Acceptance Criteria

- confirm() dialog appears when Priority = 1 - Critical.
- Field reverts to previous value when user clicks Cancel.
- Script is Active with screenshot provided.

Grading Rubric

Criteria	Pts	Notes / Hints
Client Script: correct name, table, type = onChange, field = priority	2	All 4 attributes required
confirm() dialog shown when Priority changes to '1'	3	Must use confirm(), not alert()
Priority reverts to previous value on Cancel using oldValue	2	Hardcoded fallback value = 0 pts
Script is Active and tested with screenshot of dialog	1	Screenshot of dialog required

Resolution fields should only appear when an Incident is being resolved or closed, hiding them otherwise keeps the form clean for agents during active work.

What You Need to Do

- 1
- Navigate to System Definition > UI Policies. Create a new UI Policy.
- 2
- Name: [YourName]_ShowResolutionFields. Table: Incident.
- 3
- Set Condition: State is Resolved OR State is Closed (use OR logic in condition builder).
- 4
- In UI Policy Actions tab, add 2 actions: Resolution code (Mandatory = true, Visible = true) and Resolution notes (Mandatory = true, Visible = true).
- 5
- Enable 'Reverse if false' - this automatically hides / makes optional when condition is not met, or make it with another suitable way.
- 6
- Set Active = true. Save and test: change State to Resolved and confirm fields appear; change State to New and confirm they hide.

Acceptance Criteria

- Fields appear and are mandatory when State = Resolved or Closed.
- Fields are hidden in all other states.
- 'Reverse if false' is enabled.

Grading Rubric

Criteria	Pts	Notes / Hints
UI Policy: correct name, table, condition covers both states (OR)	2	OR condition required - both Resolved AND Closed
Two UI Policy Actions: both fields set Mandatory + Visible = true	3	Both fields AND both attributes required
'Reverse if false' enabled	1	Fields must auto-hide in non-resolved states
Tested and confirmed - screenshots of shown and hidden states	1	Both states must be evidenced

Lina's manager needs to submit a formal IT setup request through the Service Portal. Build the catalog item that captures all the information the IT team needs.

What You Need to Do

- 1

Navigate to Service Catalog > Catalog Definitions > Maintain Items. Create a new Catalog Item.
- 2

Name: [YourName]_NewEmployeeOnboarding. Category: HR Services (create if needed). Short Description: 'Request IT setup for a new employee joining your team.'
- 3

Add 5 variables: (a) New Employee Full Name - Single Line Text, Mandatory. (b) Start Date - Date, Mandatory. (c) Department - Choice: IT, Finance, HR, Operations, Sales. (d) Equipment Needed - Checkboxes: Laptop, Mobile Phone, Access Badge, Headset. (e) Additional Notes - Multi-Line Text, Optional.
- 4

Set the item to Active and publish to the Service Portal.
- 5

Open the Service Portal (/sp) and locate your catalog item - confirm it is visible.
- 6

Submit a test request for 'Lina Hassan'. Screenshot the submitted RITM in Requested Items.

Acceptance Criteria

- Catalog item Active and visible in the portal.
- All 5 variables present with correct types.
- Mandatory fields show asterisk.
- Test RITM created and visible in Requested Items.

Grading Rubric

Criteria	Pts	Notes / Hints
Catalog item created: correct name, category, short description	2	Name must match exactly
All 5 variables with correct types and names	5	1 point per variable - type must be correct
Full Name and Start Date are mandatory (asterisk visible)	2	Both must show mandatory indicator
Item visible in Service Portal and test RITM created	3	Screenshot of portal search + RITM

Hint

Test the item in a separate browser tab using the /sp URL to see it as an end user. The item must be Active before it appears in the portal.

Update set is required

When Lina's manager submits the onboarding request, IT needs to be notified automatically, and a task must be created - without any manual intervention.

What You Need to Do

- 1

Open Flow Designer (Process Automation > Flow Designer). Create a new Flow.
- 2

Name: [YourName]_OnboardingFlow. Trigger: Service Catalog - Requested Item Created - target your Part 6 catalog item.
- 3

Add Action 1 - Create Catalog Task: Short Description = 'Set up IT for: ' + [New Employee Full Name variable], Assignment Group = Service Desk.
- 4

Add Action 2 - Send Email: To = Assignment Group, Subject = 'New Onboarding Request - Action Required', Body includes New Employee Full Name and Start Date from RITM variables.
- 5

Activate the Flow.
- 6

Test: Submit a new portal request and verify (a) a Catalog Task is auto-created and (b) the email appears in System Mailboxes > Outbox.

Acceptance Criteria

- Flow is Active and targeting the correct catalog item.
- Catalog Task auto-created with variable name in description.
- Email notification appears in Outbox after test submission.

Grading Rubric

Criteria	Pts	Notes / Hints
Flow created with correct name and catalog trigger targeting Part 6 item	2	Must target your specific catalog item
Catalog Task action: description uses variable data pill + correct group	3	Static text only = 1 pt
Email action with dynamic subject and body referencing RITM variables	3	Both Name and Start Date must appear
Flow is Active. Test confirms Catalog Task + email in outbox (screenshots)	2	Screenshots of task record + Outbox entry

Email Notifications

7 Points

When an Incident is assigned to an agent, they need to receive an email immediately, including the Incident number, description, priority, and a direct link.

What You Need to Do

- 1
- Navigate to System Notification > Email > Notifications. Create a new Notification.
- 2
- Name: [YourName]_IncidentAssigned. Table: Incident. When: Record updated, Condition: 'Assigned to' changes.
- 3
- Who receives it: Field value → Assigned to (dynamic - NOT hardcoded to a specific user).
- 4
- Subject: 'Incident \${number} assigned to you - \${short_description}'
- 5
- Body: Include Incident Number, Short Description, Priority, and \${URI} link to the record.
- 6
- Set Active = true. Assign an Incident to yourself and verify the email appears in System Mailboxes > Outbox.

Acceptance Criteria

- Notification is Active.
- Recipient is dynamic (Assigned to field value).
- Email appears in Outbox when Incident is assigned.

Grading Rubric

Criteria	Pts	Notes / Hints
Notification: correct name, table, and trigger (Assigned to changes)	2	Trigger must be 'Assigned to changes'
Recipient set to field value 'Assigned to' (not hardcoded)	2	Dynamic recipient required
Subject uses both \${number} and \${short_description} variables	1	Both variables must be present
Body includes Number, Short Description, Priority, and \${URI} link	1	All 4 elements required
Test confirms email in Outbox after assignment	1	Screenshot of Outbox entry

Update set is required

Hint

Check System Mailboxes > Outbox (not Sent Items) to verify the email was queued after assigning the Incident.

Before Lina's first day, configure the Service Portal so she and other users have a personalised welcome, easy access to the onboarding catalog item, and navigation shortcuts.

What You Need to Do

- 1
- Open Service Portal Designer (Service Portal > Portals > sp > Designer).
- 2
- Add an HTML widget at the top of the home page containing: 'Welcome to the IT Service Portal, {{::user.first_name}}!' - using AngularJS binding for the dynamic name.
- 3
- Confirm a Search widget is present on the page (add if missing).
- 4
- Add a Catalog Item widget configured to show your Part 6 New Employee Onboarding item.
- 5
- Add a navigation links widget with quick links for: 'Submit an Incident' and 'My Requests'.
- 6
- Preview the portal as a logged-in end user. Screenshot showing all 4 elements visible.

Acceptance Criteria

-
- Welcome message shows logged-in user's first name dynamically.
-
- All 4 portal elements visible in the end-user screenshot.
-
- Catalog Item widget targets the Part 6 item correctly.

Grading Rubric

Criteria	Pts	Notes / Hints
HTML welcome widget with dynamic {{::user.first_name}} binding	3	Static text only = 1 pt
Search widget present on the page	1	Out-of-the-box widget accepted
Catalog Item widget showing Part 6 New Employee Onboarding item	3	Must target your specific item
Navigation links widget with both required links	1	Any working link widget accepted
Screenshot as end user showing all 4 elements	2	All 4 elements must be visible in one screenshot

On Lina's first day (1 June 2026), her laptop is delivered without a keyboard. She calls the service desk. Walk the Incident through its complete lifecycle.

What You Need to Do

- 1 Create a new Incident: Caller = Lina Hassan (or Abel Tuter), Short Description = 'Laptop delivered without keyboard on first day', Category = Hardware, Subcategory = Equipment, Impact = 2, Urgency = 2.
- 2 Assign the Incident: Assignment Group = Service Desk, Assigned To = yourself.
- 3 Add a Work Note (not a Comment): 'Investigating. Confirmed laptop was shipped without keyboard. Contacting supplier.'
- 4 Change State to In Progress.
- 5 Fill in Resolution fields: Resolution Code = Solved (Permanently), Resolution Notes = 'Replacement keyboard delivered and confirmed working by Lina.'
- 6 Change State to Resolved - verify Resolved At timestamp auto-populates.
- 7 Change State to Closed. Screenshot the closed Incident record showing all fields.

Acceptance Criteria

- Incident created with all 6 specified field values.
- Work Note visible in Activity Stream.
- Resolution code and notes filled.

Hint

Work Notes are internal - they're different from Comments which are visible to the customer. Resolved At is a system-set field - it auto-populates when you move to Resolved state.

Grading Rubric

Criteria	Pts	Notes / Hints
Incident created with all 6 correct field values	2	Every specified field must match
Work Note added (not a Comment) - visible in Activity Stream	2	Work Note is internal; Comment is customer-visible
Resolution code and notes filled before resolving	2	Both fields required before state change
State transitions in correct order + Resolved At auto-set	2	All 4 states: New → In Progress → Resolved → Closed

Screenshot is required

Lina's manager has already submitted the Part 6 catalog request. Now act as the IT agent to fulfill it - progress the Catalog Task and close the RITM correctly.

What You Need to Do

- 1

Open the Service Portal (/sp) and submit the Part 6 catalog item: Name = Lina Hassan, Start Date = 01/06/2026, Department = Finance, Equipment = Laptop + Access Badge.
- 2

Note the RITM number after submission.
- 3

In the backend, open the Catalog Task auto-created by your Part 7 Flow (or create manually if flow not set up).
- 4

Update the Catalog Task: State = Work in Progress. Add Work Note: 'IT equipment ordered and being configured for Lina Hassan.'
- 5

Close the Catalog Task: State = Closed Complete.
- 6

Close the RITM: State = Closed Complete. Screenshot both closed records.

Acceptance Criteria

- RITM created and number recorded.
- Catalog Task moved to Work in Progress.
- Both Catalog Task and RITM closed as Closed Complete.

Grading Rubric

Criteria	Pts	Notes / Hints
Request submitted via Service Portal with correct variable values	2	RITM number noted in submission
Catalog Task updated to Work in Progress with correct Work Note	2	Work Note text must reference Lina Hassan
Catalog Task closed: State = Closed Complete	1	Must not skip directly to Closed
RITM closed: State = Closed Complete	2	Screenshots of both closed records required

Screenshot is required

Hint

Always close Catalog Tasks before closing the parent RITM - this is the correct fulfillment order in ServiceNow.

Following Lina's laptop issue, the IT team has identified a firmware driver bug affecting all new-hire laptops. A security patch must be deployed - this requires a formal Change Request.

What You Need to Do

- 1
- Navigate to Change > Create New > Normal Change.
- 2
- Fill in: Short Description = 'Deploy firmware security patch KB2026-06 to all new-hire laptops', Category = Hardware, Risk = Low, Assignment Group = Service Desk.
- 3
- Complete the Planning tab: Justification = 'Driver bug causes keyboard detection failure on new laptops.', Implementation Plan = 'Deploy patch during Saturday maintenance window, 02:00–04:00.', Backout Plan = 'Restore firmware from pre-patch backup image.'
- 4
- Submit for Approval by clicking 'Request Approval'. Approve the Change (use your own user or impersonation).
- 5
- Move to Implement state. Add Work Note: 'Firmware patch KB2026-06 deployed to all 12 new-hire laptops. All devices verified healthy.'
- 6
- Close the Change: State = Closed Complete, Close Code = Successful, Close Notes = 'Patch deployed successfully. No incidents post-deployment.'
- 7
- Screenshot the closed Change record.

Acceptance Criteria

-
- Change created as Normal type with all fields.
-
- All 3 Planning tab fields completed.
-
- Change approved (Approval History shows Approved).

Grading Rubric

Criteria	Pts	Notes / Hints
Change created: Type = Normal, all required fields correct	2	Type, Risk, and Category must match
All 3 Planning tab fields completed (Justification, Implementation, Backout)	2	All 3 required - blank Planning = 0 pts
Change approved - approval record visible in Approval History tab	2	Approval record must show 'Approved' state
Work Note added during Implement state + Change closed Successful	2	Both required - state must be Implement when note added

Screenshot is required

Hint

The Approval History tab on the Change record shows all approval records and their states. Close Code must be set to 'Successful' - not just 'Closed Complete' on its own.

The service desk supervisor wants a visual overview of all open Incidents grouped by Priority to monitor Lina's team's workload. Build the report and add it to a personal dashboard.

What You Need to Do

- 1
- Navigate to Reports > Create New.
- 2
- Create Report: Name = [YourName]_OpenIncidentsByPriority, Table = Incident, Type = Bar chart, Group by = Priority.
- 3
- Add filter: Active = true (or State NOT IN Closed, Cancelled) to show only open Incidents.
- 4
- Run the report - confirm data appears in the bar chart.
- 5
- Save the report.
- 6
- Navigate to Dashboards > Create New. Name = [YourName]_ServiceDeskDashboard.
- 7
- Add your report as a widget to the dashboard. Screenshot the dashboard showing the chart.

✓ Acceptance Criteria

-
- Report runs and shows bar chart grouped by Priority.
-
- Filter excludes Closed/Cancelled Incidents.
-
- Dashboard created with report widget.

Grading Rubric

Criteria	Pts	Notes / Hints
Report: correct name, table = Incident, type = Bar, grouped by Priority	2	All 4 attributes required
Filter correctly limits to active / open Incidents only	1	Closed incidents must NOT appear in chart
Dashboard created with report widget showing chart	2	Screenshot of dashboard required

You've Got This!

Final Reminders Before You Begin

- Read each Part fully before starting - the scenario is continuous.
- Name every artifact [YourName]_ or it won't be graded.
- Take labelled screenshots as you go - don't leave them to the end.
- Test every configuration as an end user before moving to the next Part.
- Partial credit is always given - attempt every Part.
- Leave all records intact in your PDI instance for the assessor.
